

Compliance Overview — AI Relationship Manager Platform

Client: Indian Bank

Technical Service Provider: Silver Suits AI

Date: April 20, 2026

Version: 2.0

1. Objective

To enable the AI Relationship Manager platform, there are multiple compliance approvals to follow data processing & storage policy, encryption at rest & transit, etc. This document elaborates on every component of this AI platform's base architecture. Use case wise compliance is detailed separately and attached with this document.

2. What We Are Providing

An AI voice calling system that automatically calls bank employees after a new account is opened, guiding them to help the customer download and activate the mobile banking app.

#	Deliverable	Description
1	One REST API endpoint	A single HTTPS API that the bank's system calls to trigger a voice call
2	AI Voice Agent	A multilingual speech AI agent that handles the conversation with the employee
3	Analytics Dashboard	Web-based dashboard showing call outcomes, success rates, branch-wise performance
4	Result Callback API	After each call, we push the outcome back to the bank's system (optional)
5	Full DPDP & RBI Compliance	All data is processed in India and stored within Indian borders, zero retention on AI services, encryption at rest and in transit

2. Overview of the Architecture

2.1 All Components

The table below shows every component in our system and how it meets all compliance standards as per DPDP Act 2023 and RBI requirements.

C = Compliant

	Backend API	Exotel	AI Voice Bot	STT	LLM	TTS	Data base	Dashbo ard
Description	Azure	Teleph ony	Pipecat Cloud	Eleven Labs	Azure OpenAI	Cartesia	Bank's own	AWS Mumbai
Data stored in India	C	C	C	C	C	C	C	C
Data encrypted in transit (TLS 1.2+)	C	C	C	C	C	C	C	C
Data encrypted at rest (AES-256)	C	C	C	C	C	C	C	C
Zero data retention	N/A (stores to bank DB)	C (6 mos)	C (epheme ral, no disk)	C	C	C	N/A (perman ent store)	N/A (reads from DB)
Data doesn't leave Indian borders	C	C	C	C	C	C	C	C
No customer data used for AI model training	N/A	N/A	N/A	C	C	C	N/A	N/A

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

	Backend API	Exotel	AI Voice Bot	STT	LLM	TTS	Data base	Dashbo ard
Description	Azure	Teleph ony	Pipecat Cloud	Eleven Labs	Azure OpenAI	Cartesia	Bank's own	AWS Mumbai
Access control (authentication required)	C	C	C	C	C	C	C	C
SOC 2 Type II / ISO 27001 certified (attached)	C (Azure)	C (ISO 27001, PCI DSS)	C (Daily.co SOC 2)	C (SOC 2)	C (SOC 2, ISO 27001)	C (SOC 2)	C (AWS)	C (AWS)
Data Processing Agreement (DPA) attached	Yes	Yes	Yes	Yes	Yes	Yes	N/A	Yes
Data retention per RBI/DPDP policy	C	C (6 mos)	C (no retention)	C (no retentio n)	C (no retention)	C (no retention)	C (configur able per bank policy)	C

As these links might not be accessible, documents have been downloaded and attached.

2.2. Architecture Diagram

Please note that:

1. The system is built to act instantaneously (few hundred milliseconds) at every node with an overall latency of less than 1 second.
2. To reduce the load on the bank's system, the rule engine is configured and sits in our backend (Mumbai). This rule engine ingests all required information (through API calls) to make a decision e.g. when to trigger the voice AI, what function needs to be called.

Please refer to Section 2.3 for a detailed example of this workflow

2.2 Data Flow and Storage

Step	Data	Where It Goes	Stored?	Retention
Bank calls our API	Employee phone, customer profile, branch	Our backend (Azure India)	Passed to DB, not cached	No
We trigger the call	Employee/user phone number	Exotel (India)	Call log in Exotel	6 months - as per Exotel policy
Employee/User speaks	Voice audio	ElevenLabs STT (India)	NOT stored or trained	Zero retention
AI thinks	Conversation text	Azure OpenAI LLM (India)	NOT stored or trained	Zero retention
AI speaks	Response audio	Cartesia TTS (India)	NOT stored or trained	Zero retention
Call ends	Transcript + outcome	Bank's own database (India)	YES - stored OnPrem	Per bank's policy**
Dashboard viewed	Analytics	Read from bank's DB	No separate copy	N/A

What is NEVER stored (not in DB, not in logs, not on disk):

- Voice audio recordings of either the employee or customer
- Voice biometric data
- AI model training data
- Raw audio files

If there is a need to store such specific data, a separate process will be followed for the same.

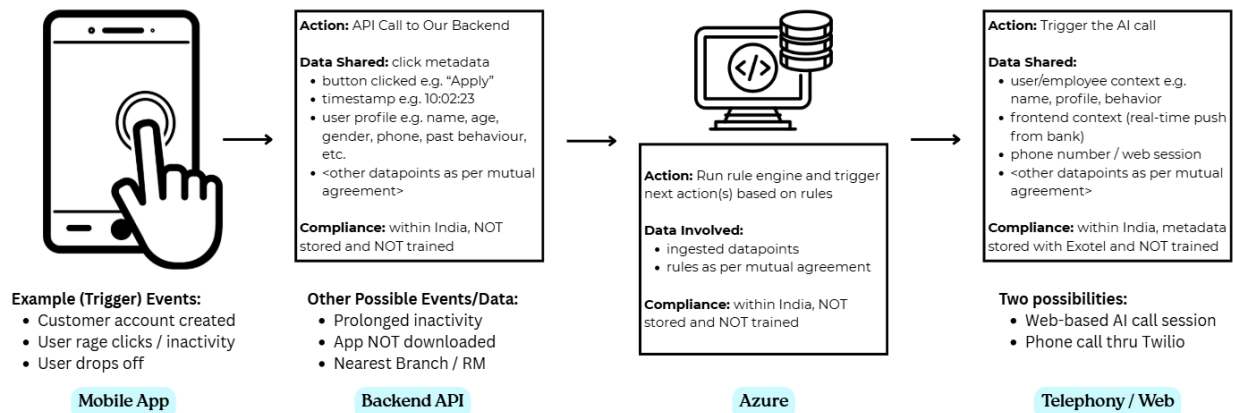

**What IS stored and HOW (in bank's own database OnPrem only):

- Call text transcript (what was said)
- Call outcome (app downloaded / declined / not reachable)
- Call metadata (duration, branch, timestamp)
- Analytics aggregates

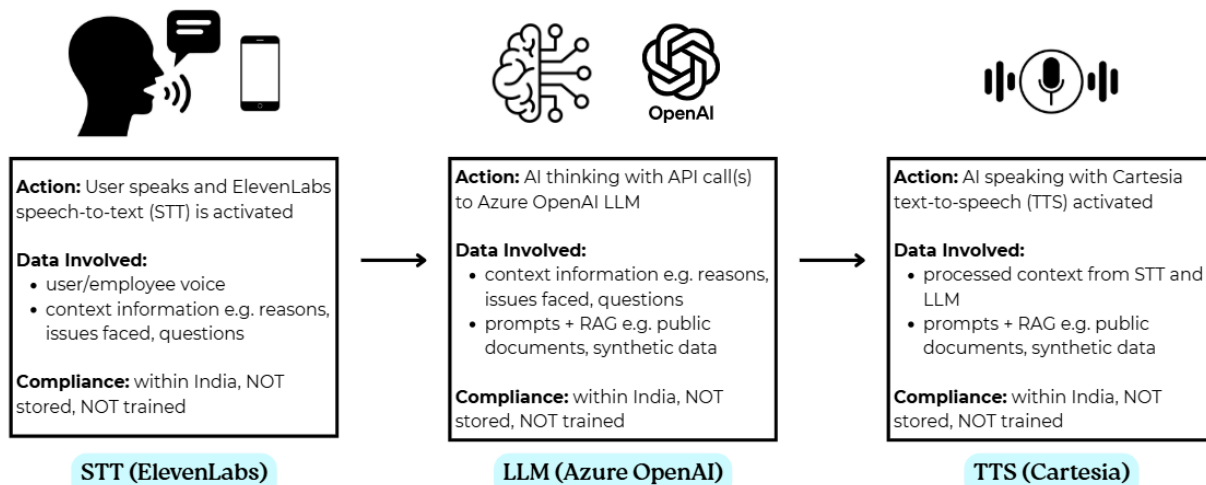

2.3 Frontend Visualization of the Data Flow

Presented below is an end-to-end data flow diagram showcasing which data points are shared, which component accesses those data points, what actions are taken with those data points, how compliance requirements are followed, and examples of possible user events:

After the trigger for AI voice RM is initiated, the following components are activated. The image below presents which data is processed, how the processed data moves, which components are involved and how they follow the compliance requirements:

After the conversation ends, the transcript of the entire conversation (between AI and user/employee) is processed along with the outcome e.g. user needs in-person visit so trigger a message for nearest human RM. Please note, there are multiple API calls to the LLMs based on the complexity of the task during and after the call.

The transcript and outcome are pushed to the bank's DB as per Section 2.2.

3. Component-by-Component Compliance

4.1. Component 1: Backend API Server

	Details
What it does	Receives the trigger from the bank's system, validates the request, initiates the phone call, and stores results
Hosted on	Azure India (Central and South India)
Data it handles	Employee phone number, employee name, customer name, account type, branch code

DPDP / RBI Requirement	Status
Data stored and processed in India	✓ Azure India (Central and South India). All data stays in India.
Data encrypted in transit	✓ All API communication over HTTPS (TLS 1.2+).
Data encrypted at rest	✓ Secrets stored in Azure Key Vault (FIPS 140-2 Level 2 and 3 compliant, using AES-256).
Access control	✓ API authenticated via OAuth2/Bearer token (Microsoft Entra ID). Access restricted via Network Security Groups (NSGs) and Service Tags.
SOC 2 / ISO 27001	✓ Azure is certified for SOC 1/2/3, ISO 27001, and PCI DSS. (Specific to Microsoft India regions).
DPA available	✓ Microsoft Products and Services DPA
Data retention per RBI/DPDP	✓ Backend does not store data on disk. All data written to the bank's own database.
Others	No customer data cached on disk. Stateless processing only.
Reference for more details	https://learn.microsoft.com/en-us/azure/security/

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

Component 2: Exotel — Telephony

	Details
What it does	Places the phone call to the bank employee and carries the audio between the employee and the AI bot
Hosted on	Exotel's own servers in India
Data it handles	Employee phone number, call audio (real-time), call recordings

DPDP / RBI Requirement	Status
Data stored and processed in India	✅ Exotel is an Indian company. All servers and data in India. Licensed by Government of India.
Data encrypted in transit	✅ Audio transmitted over encrypted WebSocket (WSS/TLS).
Data encrypted at rest	✅ Call recordings encrypted at rest on Exotel's Indian servers.
Access control	✅ API access via authenticated API key + token.
SOC 2 / ISO 27001	✅ ISO 27001:2013 and PCI DSS certified.
DPA available	✅ Service agreement with data protection clauses.
Data retention per RBI/DPDP	✅ Call recordings stored on Exotel's Indian servers for 6 months, then automatically deleted.(optional)
Reference for more details	https://exotel.com/security/

Component 3: AI Voice Bot — Pipecat Cloud

	Details
What it does	Runs the AI conversation during the phone call. Receives the employee's voice, understands it, generates a response, and speaks it back.
Hosted on	Pipecat Cloud — Mumbai region (ap-south)
Data it handles	Real-time audio stream (during call only), conversation context (in memory only)

DPDP / RBI Requirement	Status
Data stored and processed in India	✅ Deployed on Pipecat Cloud Mumbai (ap-south). Bot container runs entirely in India.
Data encrypted in transit	✅ WebSocket audio stream encrypted via TLS.
Data encrypted at rest	✅ No data written to disk — ephemeral container.
Access control	✅ Bot access restricted to authenticated sessions only.
SOC 2 / ISO 27001	✅ Daily.co (Pipecat Cloud infrastructure) SOC 2 Type 2 certified.
DPA available	✅ Data Processing Agreement available at https://trust.daily.co/
Data retention per RBI/DPDP	✅ Zero retention. Ephemeral container — conversation context exists only in memory during the call and is discarded when the call ends. No audio written to disk.
Others	No persistent storage. No recordings created. Audio streamed in real-time only.
Reference for more details	https://docs.pipecat.ai/deployment/pipecat-cloud/security/security-and-compliance

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

Component 4: Speech-to-Text (STT) — ElevenLabs

	Details
What it does	Converts the employee's spoken words into text so the AI can understand what was said
Hosted on	ElevenLabs India Data Residency (Enterprise plan)
Data it handles	Audio chunks from the employee's speech

DPDP / RBI Requirement	Status
Data stored and processed in India	✓ ElevenLabs India Data Residency. All voice data processed on India-based servers only. Infrastructure fully isolated from global systems.
Data encrypted in transit	✓ TLS 1.2+ for all API communication.
Data encrypted at rest	✓ AES-256 encryption.
Access control	✓ Authenticated via API key.
SOC 2 / ISO 27001	✓ SOC 2 Type II certified. HIPAA-ready.
DPA available	✓ Data Processing Addendum available (Refer https://elevenlabs.io/dpa)
Data retention per RBI/DPDP	✓ Zero data retention. Voice audio is not stored after processing. Transcribed in real-time and immediately discarded.
Others	ElevenLabs does not use API data to train models.
Reference for more details	https://elevenlabs.io/docs/overview/administration/data-residency

Component 5: AI Language Model (LLM) — Azure OpenAI

	Details
What it does	The AI brain. Understands the conversation and decides what to say next. Follows the conversation script to guide the employee.
Hosted on	Option A: OpenAI India Data Residency (Enterprise plan). Option B: Google Gemini on Google Cloud India region (asia-south1).
Data it handles	Conversation text (what the employee said and the AI's response)

DPDP / RBI Requirement	OpenAI
Data stored and processed in India	✓ India Data Residency — all data stored in India only.
Data encrypted in transit	✓ TLS 1.2+
Data encrypted at rest	✓ AES-256
Access control	✓ API key + project-level access.
SOC 2 / ISO 27001	✓ SOC 2 Type II, ISO/IEC 27001:2022
DPA available	✓ Data Processing Addendum available.
Data retention per RBI/DPDP	✓ Zero retention. Data not stored after processing.
Others	Does NOT train models on API data.
Reference for more details	https://openai.com/index/expanding-data-residency-access-to-business-customers-worldwide

OpenAI LLM is accessed through its cloud provider (Azure) which has its endpoints in Chennai

Component 6: Text-to-Speech (TTS) — Cartesia

	Details
What it does	Converts the AI's text response into natural human-sounding speech (Hindi/English) that the employee hears on the phone
Hosted on	ElevenLabs India Data Residency (Enterprise plan)
Data it handles	Text of the AI response to be spoken

DPDP / RBI Requirement	Status
Data stored and processed in India	✓ ElevenLabs India Data Residency. All processing on India servers only.
Data encrypted in transit	✓ TLS 1.2+
Data encrypted at rest	✓ AES-256
Access control	✓ Authenticated via API key.
SOC 2 / ISO 27001	✓ SOC 2 Type II certified.
DPA available	✓ Data Processing Addendum available.
Data retention per RBI/DPDP	✓ Zero retention. Generated audio is not stored. Text input is not stored.
Others	Does not use API data to train models.
Reference for more details	https://cartesia.ai/regions/india

Component 7: Database

	Details
What it does	Stores call records, transcripts, outcomes, and analytics. The only place where data is permanently stored.

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

	Details
Hosted on	Bank's choice (see options below)
Data it stores	Call session records, call transcripts, call outcomes, branch analytics

Hosting options (bank chooses):

Option	Where It Runs	Who Controls It
A. AWS DocumentDB in bank's own AWS account	AWS Mumbai (ap-south-1), inside bank's VPC	Bank's IT team
B. MongoDB Atlas Dedicated on bank's AWS	AWS Mumbai, with bank-managed encryption keys	Joint — MongoDB manages engine, bank controls access

Reference for more details on AWS Document DB:

<https://docs.aws.amazon.com/documentdb/latest/developerguide/security.html>

Reference for MongoDB: <https://www.mongodb.com/products/platform/trust>

DPDP / RBI Requirement	Status
Data stored and processed in India	✓ All options are in India (Mumbai or bank's own data center).
Data encrypted in transit	✓ All database connections over TLS.
Data encrypted at rest	✓ AES-256 with bank-controlled encryption keys (AWS KMS or bank's own key management).
Access control	✓ Database accessible only from backend server's IP. No public internet access.
SOC 2 / ISO 27001	✓ AWS SOC 1/2/3, ISO 27001 (if on AWS). Bank's own certifications if on-premise.
DPA available	✓ AWS or MongoDB DPA. Not needed if on bank's own infrastructure.

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

DPDP / RBI Requirement	Status
Data retention per RBI/DPDP	✓ Financial records retained for 7 years per RBI/PMLA. Non-essential data auto-deleted per DPDP Act. Configurable per bank policy.
Others	The bank has full ownership and control of all stored data. We access the database only to read/write call records.
Reference for more details	https://aws.amazon.com/compliance/india-data-protection/

Component 8: Analytics Dashboard

	Details
What it does	Web dashboard for the bank team to view call performance
Hosted on	Azure India (Central and South India)
Data it handles	Reads from the bank's database (does not store data separately)

DPDP / RBI Requirement	Status
Data stored and processed in India	✓ Hosted in Azure India (Central and South India). Reads from the bank's own database.
Data encrypted in transit	✓ HTTPS only. No HTTP access.
Data encrypted at rest	✓ No separate data stored. All data in the bank's database.
Access control	✓ Login required (username + password). JWT-based authentication. Can be restricted to the bank's IP range.
SOC 2 / ISO 27001	✓ Azure SOC 1/2/3, ISO 27001, and PCI DSS (specific to Microsoft India regions)
DPA available	✓ Microsoft Products & Services Data DPA

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

DPDP / RBI Requirement	Status
Data retention per RBI/DPDP	✓ No separate data store. Retention governed by database (Component 7).
Others	Does not maintain its own database. All data read from bank's DB in real-time.
Reference for more details	https://learn.microsoft.com/en-us/azure/security/

5. Summary

Total components	8 (Backend, Exotel, Pipecat Cloud(AI Bot, STT, LLM, TTS), Database, Dashboard)
Components hosted in India	All 8
Components with zero data retention	3 (ElevenLabs STT, OpenAI LLM, ElevenLabs TTS)
Data owned by the bank	All persistent data (transcripts, analytics, call records)
Data stored outside India	None
Voice recordings stored	With Exotel in India servers.
Integration effort for bank	Add one API call + provide a database
Certifications	Azure SOC 2 + ISO 27001, OpenAI SOC 2 + ISO 27001, ElevenLabs SOC 2, Exotel Indian telecom licensed

Please note: The UI is subject to change based on business requirements, compliance approvals and development activities. The above image is just a glimpse for easy understanding

The following are some of the standard parameters extracted from each conversation. These are standard and new/change of parameters are allowed as per requests raised.

Category	Parameter	Sub-parameter	Description of the (sub) parameter
Revenue Opportunities	Up-selling	Product Items	List of products that can be up-sold
		Context derived from the call	The Trigger/Pain Point where the customer expressed a need
		Helping cues	Any pointer that can help convert the user
	Cross-selling	Customer intent strength:	High / Medium / Low
		Product Items	List of products that can be up-sold
		Context derived from the call	The Trigger/Pain Point where the customer expressed a need
Future Directions	Task List	Helping cues	Any pointer that can help convert the user
		Customer intent strength:	High / Medium / Low
		Description of the task (the what)	what is the exact action item that needs to be performed.
		Deadline for the task (the when)	Either a timestamp or SLA-based Deadlines.

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

		Team assigned (the who)	the Functional Department responsible for the task
		Priority of the task	High / Medium / Low
Conversational dynamics	Soft Skills	Talk-to-Listen Ratio	The percentage of time the agent spoke vs. the customer
		Over-talking / Interruptions	Frequency of "collisions" where both parties speak at once
Agent-wise Analytics	Hard Skills	Script Compliance	Percentage match against mandatory workflows for the call
		Empathy Score	AI-detected markers of validating language
		Objection Handling	Performance score on how effectively the agent pivoted
		Prohibited Content Alerts	Flags & counts use of "filler words" or restricted language
		Soft Skills Index	[Empathy count] + [Active listening count] - [Interruptions]
		Automated QA Score	A composite 1–100 grade based on all the above
Customer Behaviour	Sentiment Analysis	Sentiment Trajectory	Tracking the shift from Negative (at start) to Positive (at end)
		Intent Categorization	Automated tagging of the call purpose
		Product/Competitor Mentions	Frequency and context of specific brand or competitor names
		Churn Risk Probability	A predictive score indicating the likelihood of the customer leaving
Conversation Milestones	Comm Workflow	Opening of the Call	Presence of Brand Name + Warmth (Pitch) + Proper Greeting
		Defining the Call	Detects "Framing Sentences" and customer acknowledgement.
		Problem ID	Extracting "Root Cause" keywords
		Solution	Semantic match between Problem identified and Support database.
		User satisfaction	Sentiment at the specific moment of solution delivery
		Closing the Call	Summary of action items + "Anything else?" prompt + sign-off.
Compliance & Regulation	Tagging Risks	Regulatory Mandatory Disclosures	Did the agent say the "Must-haves" wherever needed?

		PCI/PII Redaction Check	Did the agent correctly handle sensitive data?
		Misleading Claims/Promises	detection of "Over-promising"
		Right to Privacy/DNC	Did the agent respect a "Do Not Call" or "Delete my data" request?

Appendix 2: Detailed legal considerations

1. Definition of Confidential Information

"Confidential Information" shall include all non-public, proprietary, or sensitive information disclosed by either party, including but not limited to:

- **For Silver Suits AI:** Software architecture, source code, UI/UX screens, technical workflows, logic flows, system design documents, and development methodologies.
- **For Indian Bank:** Databases, customer PII (Personally Identifiable Information), internal financial workflows, business processes, and transaction data.
- **For Both:** Pricing structures, discount models, commercial terms, and any other business, technical, or financial information marked as "Confidential" or which reasonably ought to be considered confidential given the nature of the information.

2. Obligations of Receiving Party

The Receiving Party agrees to:

- Use the Confidential Information solely for the purpose of evaluating or performing the potential business engagement between the Parties.
- Maintain the confidentiality of such information with the same degree of care as it uses for its own confidential information, but in no event less than a reasonable degree of care.
- Restrict access to the Confidential Information only to those employees or consultants who have a "need to know" and who are bound by confidentiality obligations at least as restrictive as those contained in this Agreement.

3. Exclusions

Confidential Information does not include information that:

- Is or becomes public knowledge through no fault of the Receiving Party.
- Was rightfully in the possession of the Receiving Party prior to disclosure.
- Is independently developed by the Receiving Party without reference to the Confidential Information.

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

- Is required to be disclosed by law, regulation, or court order (provided the Disclosing Party is given prompt notice).

4. Ownership and Return of Materials

All Confidential Information shall remain the exclusive property of the Disclosing Party. Upon the written request of the Disclosing Party or upon termination of the business relationship, the Receiving Party shall promptly return or destroy all copies of the Confidential Information and certify such destruction in writing.

5. Term and Survival

This Confidentiality Agreement shall remain in effect for a period of 3 years from the Effective Date. The obligations of confidentiality shall survive the termination or expiration of this Agreement for a period of 5 years.

6. Remedies

The Parties acknowledge that a breach of this Agreement may cause irreparable harm for which monetary damages may be inadequate. Therefore, the non-breaching party shall be entitled to seek injunctive relief in addition to any other remedies available at law or in equity.

6. Audit Rights & Principal Rights

Right to Audit: Upon providing reasonable prior notice, the Client or its authorized representative (including statutory regulatory bodies such as the Reserve Bank of India) shall have the right to audit the Silver Suits AI's data handling practices. This includes the right to request evidentiary logs or certificates of destruction confirming the "30-Day Purge" cycle (15-Day as per agreed SLA and 30-Day as per DPDP guidelines) has been successfully executed for the Client's data.

Right to Nominate: In accordance with the Digital Personal Data Protection (DPDP) Act, the Silver Suits AI acknowledges the Client's right to nominate any individual to exercise the rights of a Data Principal (such as access, correction, or erasure) in the event of the Client's death or incapacity. Silver Suits AI shall facilitate such requests upon verification of the nominee's credentials.

8. Miscellaneous

- **Bias & Fairness:** Silver Suits AI utilizes market-leading, enterprise-grade AI models (as disclosed under the base architecture) curated to minimize algorithmic bias across different accents and dialects.
- **Output Verification:** While Silver Suits AI ensures maximum data security, the Client acknowledges that AI-generated outputs (transcripts/insights) may occasionally contain inaccuracies. The Client is responsible for verifying the accuracy of such outputs before using them for high-stakes financial decisions.

SILVER SUITS AI

AI Coworkers for BFSI Segments to Scale

- To ensure the accuracy of AI outputs, limited and authorized personnel of Silver Suits AI may perform manual reviews of data segments. Such access is restricted to a "need-to-know" basis and is logged for auditing purposes. All personnel involved are bound by strict non-disclosure agreements (NDAs).
 - Indian Bank maintains the right to request earlier deletion of specific data points as per statutory requirements.
 - Silver Suits AI shall actively engage with the compliance team at Indian Bank when new AI Providers / Models are considered and need to be approved before inclusion in production.
-

This document is confidential and intended for Indian Bank's concerned team(s) only.
